

COMPANY

This European Network Marketing Partnership began operation in UK 2000, gaining massive experience in building large organisations throughout Mainland Europe. An individual team of 4,500+ Business Affiliate Partners with 250,000+ happy customers receiving multiple quality services and consistent savings.

The total corporate customer base of 1.5 million customers using multiple services, billing over 5 million services each month

MISSION

To support its customers by offering innovative, low cost alternatives to their everyday consumer needs whilst creating financial independence for their Business Affiliate Partners.

To be a major market shareholder of the commercial and residential communications, energy, water utility services and funding solutions provided throughout Europe. Our unique leadership experience coupled with its commitment to the support and success of its Consultant Affiliate Partners is leading to massive business growth every day.

INDUSTRY

Communication, energy and water utility services supply had always been an unfair state monopoly.

Today, because of government deregulation agreements, customers now have a choice of supply. The new liberalised telecommunication, water utilities and energy industry is a dynamic evolving revolution.

MARKET PLACE

We currently operate our business in UK. This market has a potential of 3 million customers.

The total market potential of Europe is 250 million consumers taking multiple services.

MARKETING

Relationship marketing is a concept of simply recommending a company and its services it offers to others. By referring business to the company you can be paid for that recommendation. It is easy to market a quality service that delivers consistent savings to its customers.

A unique marketing plan rewards individuals for referring business to the company and introducing others to do the same.

EXCITING SERVICE RANGE

We currently offer services to commercial consumers in the UK. In the future, all services into each different country will feature innovation and genuine savings. Services will include gas and electric energy, water utilities, digital TV, fiber broadband and mobile communications.

Do you find this interesting?

We are always looking for pioneering business partners!
